

PATHOGENIC SYSTEM

Presumptive Identification of the main pathogenic microorganisms directly from several Clinical Specimens

Liofilchem® and the Liofilchem company logo are registered trademarks of LIOFILCHEM s.r.l.

★ Several clinical specimens

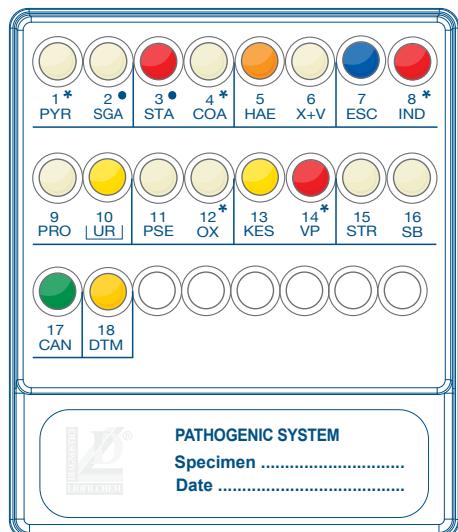

Pharyngeal swab, Cutaneous swab,
Auricular swab, Ophthalmic swab,
Expectorate and other clinical specimens.

★ Direct microbial identification

Streptococcus pyogenes (Group A),
Staphylococcus aureus,
Haemophilus spp.,
Escherichia coli,
Proteus spp., *Providencia* spp.,
Pseudomonas spp.,
Klebsiella spp., *Enterobacter* spp., *Serratia* spp.,
Enterococcus spp. (Group D),
Candida spp., Dermatophytes spp.

★ Benefits

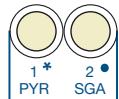

- ✓ Complete diagnosis
- ✓ Save time and labor with direct testing
- ✓ Results in 18-24-48 hours
- ✓ Confirmation with serum agglutination tests
- ✓ Clear and well defined color changes
- ✓ Easy interpretation

PATHOGENIC SYSTEM

RESULTS

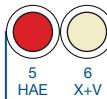

Identification

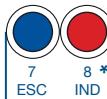

Streptococcus pyogenes (Group A)
 * PYR test
 • agglutination test

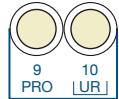

Staphylococcus aureus
 • agglutination test
 * coagulase test

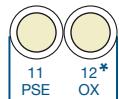

Haemophilus spp.
 - confirm by culture medium

Escherichia coli
 * Indole test

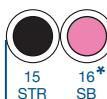

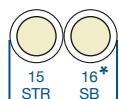

Proteus/Providencia spp.

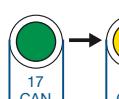

Pseudomonas spp.
 * Oxidase test

Klebsiella/Enterobacter/Serratia spp.
 * VP test

Enterococcus spp. (Group D)

Candida spp.
 - confirm at the microscope

Dermatophytes
 - confirm at the microscope

TEST PROCEDURE

1

- Dip the swab of the specimen into a tube of nutrient broth and incubate at 36±1°C for 2-4-6 hours.
- Transfer 0.5 mL of culture broth into the vial of Physiological Solution (**Specimen Suspension**).

2

- Add a Pyr Disc into the well 1-PYR.
- Add 0.2 mL of the Specimen Suspension into each well of the system, add one drop of vaseline oil into the well 10-UR.
- Incubate at 36±1°C for 18-24 h.

3

- Add two drops of PYR Reagent into the well 1-PYR. The pink-red colouring of the disc within 5 minutes identifies *Streptococcus pyogenes* (Group A).
- Confirm the presence of *S. pyogenes* (Group A) by Strepto A latex kit.

4

- Confirm the presence of *Staphylococcus aureus* by Staph latex kit or coagulation test.
- Confirm the presence of *Haemophilus* spp. by inoculating a selective culture medium.

5

- Confirm the presence of *Escherichia coli* adding two drops of Kovac's Reagent into the well 8-IND (Indole Test).
- Confirm the presence of *Pseudomonas* spp. adding a disc of Oxidase test into the well 12-OX.

6

- Confirm *Candida* spp./Dermatophytes by taking a drop from the positive wells 17-CAN/18-DTM and watch for spores at the microscope (400x).
- Note down the test results on the form provided in the kit, or read and interpret by **automatic readers**.
