

NCTC® derived CultiControl Lyophilized organisms

CultiControl microorganisms are lyophilized, reference stock culture preparations containing a single strain of a microorganism. These microorganism preparations are intended to be used for quality control of culture media, educational/instructional programs and industrial applications. The microorganism preparations are derived from NCTC® (National Collection of Type Cultures, operated by the UK Health Security Agency (UKHSA)). CultiControl microorganisms are packaged in a resealable vial that contains five (5) or two (2) lyophilized pellets of a single microorganism strain and a desiccant to prevent adverse accumulations of moisture.
