

# MIC Test Strip Technical Sheet **Enterococci VRE**

**Enterococcus:** Gram positive cocci, e.g. *E. faecalis*, *E. faecium*, *E. casseliflavus*, *E. gallinarum*, *E. flavesiens*, *E. mundtii*.

<b>Infections</b>	<ul style="list-style-type: none"> <li>Nosocomial infections in immunocompromised and ICU patients, especially neonatal and burns units.</li> <li>Complicated UTIs, sepsis, intra-abdominal and wound infections.</li> <li>Surgical site infections 12%</li> <li>Mortality of 35-40% in nosocomial sepsis in ICUs.</li> </ul>						
<b>Antibiotic Resistance</b>	<ul style="list-style-type: none"> <li>Vancomycin-resistant Enterococci (VRE) have vancomycin MIC &gt; 4 µg/mL.</li> <li>Intrinsic high level resistance to cephalosporins, penicillins and low level resistance to clindamycin and aminoglycoside.</li> <li>Acquired resistance to chloramphenicol, tetracyclines, fluoroquinolones, erythromycin and high level resistance to clindamycin and aminoglycoside.</li> <li>VRE phenotypes (vanA, B, C, D, E) may have different treatment and infection control implications</li> </ul>						
<b>Susceptibility Testing Needs</b>	<ul style="list-style-type: none"> <li>MIC testing is recommended for blood, wounds and sterile sites (tissues, peritoneal fluid).</li> <li>Glycopeptide resistance monitoring using MIC methods for ICU isolates.</li> </ul>						
<b>Methods</b>	<table border="1"> <tr> <td>• Discs</td> <td>Not recommended for glycopeptides due to poorly resolved gradient and inaccurate results.</td> </tr> <tr> <td>• Microdilution and automation</td> <td>Inability to detect resistance due to low inoculum and/or rapid reading.</td> </tr> <tr> <td>• MIC Test Strip</td> <td> <ul style="list-style-type: none"> <li>Preformed gradient overcomes problems of slow diffusion of large molecules e.g. vancomycin and teicoplanin.</li> <li>Recommended by reference groups (CDC, CPHL) for surveillance of VRE</li> <li>Vancomycin and teicoplanin used together can discriminate phenotypes</li> <li><b>Macro gradient test</b> with heavier inoculum (2McF), optimal growth media (BHI) and extended incubation (48 hours) optimises detection of resistance</li> </ul> </td> </tr> </table>	• Discs	Not recommended for glycopeptides due to poorly resolved gradient and inaccurate results.	• Microdilution and automation	Inability to detect resistance due to low inoculum and/or rapid reading.	• MIC Test Strip	<ul style="list-style-type: none"> <li>Preformed gradient overcomes problems of slow diffusion of large molecules e.g. vancomycin and teicoplanin.</li> <li>Recommended by reference groups (CDC, CPHL) for surveillance of VRE</li> <li>Vancomycin and teicoplanin used together can discriminate phenotypes</li> <li><b>Macro gradient test</b> with heavier inoculum (2McF), optimal growth media (BHI) and extended incubation (48 hours) optimises detection of resistance</li> </ul>
• Discs	Not recommended for glycopeptides due to poorly resolved gradient and inaccurate results.						
• Microdilution and automation	Inability to detect resistance due to low inoculum and/or rapid reading.						
• MIC Test Strip	<ul style="list-style-type: none"> <li>Preformed gradient overcomes problems of slow diffusion of large molecules e.g. vancomycin and teicoplanin.</li> <li>Recommended by reference groups (CDC, CPHL) for surveillance of VRE</li> <li>Vancomycin and teicoplanin used together can discriminate phenotypes</li> <li><b>Macro gradient test</b> with heavier inoculum (2McF), optimal growth media (BHI) and extended incubation (48 hours) optimises detection of resistance</li> </ul>						

## Macro gradient test for determining Vancomycin-resistant Enterococci (VRE)

<b>Phenotype</b>	<b>M.I.C. (µg/mL)</b>		<b>Species</b>
	<b>VANCOMYCIN</b>	<b>TEICOPLANIN</b>	
VanA	≥32 (R)	and ≥16 (I-R)	<i>E. faecalis</i> <i>E. faecium</i>
VanB	≥8-256 (I-R)	and ≤4 (S)	<i>E. faecalis</i> <i>E. faecium</i>
VanC1	4-16 (S-I)	and ≤4 (S)	<i>E. gallinarum</i>
VanC2	4-16 (S-I)	and ≤4 (S)	<i>E. casseliflavus</i> <i>E. flavesiens</i>
VanD	64 (R)	and ≤4 (S)	<i>E. faecium</i>
VanE	16 (I)	and ≤4 (S)	<i>E. faecalis</i>

This test gives an indication of reduced vancomycin susceptibility but note that the readings are not MICs.
